and assets

# DAM Connector Pack

## Seamlessly connect all your content and assets

Enterprise companies have thousands of assets to manage, including videos, PDFs, and images, all of which need to be well organized and easily accessible to help speed up new projects. Typically, brands will leverage a digital asset management (DAM) system to get the job done—but what happens when you migrate to a new CMS? After all, as many companies have found out, migrating assets from one DAM to another can be near impossible.

The Magnolia DAM Connector Pack makes assets from an existing DAM available directly within the CMS. The DAM Connector Pack currently supports Amazon Simple Storage Service (S3) and Bynder, with support for more DAM products on the way.

The screenshot displays the Magnolia DAM Connector Pack interface. At the top, the Magnolia logo is on the left, followed by a search bar labeled 'Find...'. On the right, there are indicators for '0 Tasks', '0 Notifications', and a user profile for 'superuser'. Below this is a tab labeled 'Amazon S3 browser'. The main content area is titled 'Amazon S3 browser' and contains a table with columns 'Name' and 'Status'. The table lists several folders and files, with 'Beach Seats.jpg' selected and highlighted in green. A context menu is open over the selected file, showing options: 'Delete asset', 'Download asset', 'Copy asset', 'Publish', and 'Unpublish'. Below the menu is a 'Preview' section showing a thumbnail of the selected image. At the bottom left, the file path 's3./magnoliatest/test/Beach Seats.jpg' is visible.

# Future-proof and flexible

## *Work with multiple DAM systems in parallel*

Easily connect new or existing DAM systems as needed. Your organization will be ready for potential mergers and acquisitions, as new external DAM systems can easily be added. Multinational companies often have different DAM systems in different countries or regions, but this isn't an issue because multiple systems can be connected and used in parallel. You also won't have to worry about dealing with the difficulties of migrating assets. Save time and money now and in the future with the Magnolia DAM Connector Pack.

# No code integration

## *Integrate existing DAM products without coding*

With the DAM Connector Pack, technical team members can connect existing DAM systems with only a few lines of configurations. It's quick and easy to seamlessly integrate Magnolia with DAM products. Reduce the need for development when connecting DAM products with this no code solution.

# Keep existing processes

## *There's no need to change your current processes and workflows*

When you use the DAM Connector Pack, your organization can continue working with the external DAM as if nothing has changed. Because a migration is no longer necessary, creatives, marketers and other departments won't be disrupted or forced to learn new procedures. The DAM Connector Pack is also a solution for DAM systems that must remain in place because they rely on other vital processes or systems at your company.

# Content App

## *Browse and view assets in the Magnolia Content App*

Content authors can browse assets from an external DAM within Magnolia just as simply as the CMS's internal DAM module. Marketers can edit images, tags, metadata, and more - all from one place. It's easy to select external assets for use within pages and other content types, so that marketers can create websites and other headless experiences with the assets.
